

Real-Time Email Protection Powered by the Cloud

Singtel Email Security-as-a-Service leverages the power of sophisticated cloud security to stop email spam and threats from entering your network. Inbound and outbound content filtering as well as encryption give your business real-time protection at reduced costs and complexity, while tailored email security policies adapt to your unique business requirements.

Email Security-as-a-Service

Can You Afford to Compromise Your Email Communications?

Email is vital to business. It doesn't just serve as an effective communications medium; it also offers a de facto record of a company's business transactions and internal operations. But with an evolving threat landscape and a distributed workforce, what has become a mission critical application for any company is growing as an avenue for threat and disruption. Increasingly, a burden is placed on time and resources to manage threats, and profitability is quickly jeopardised.

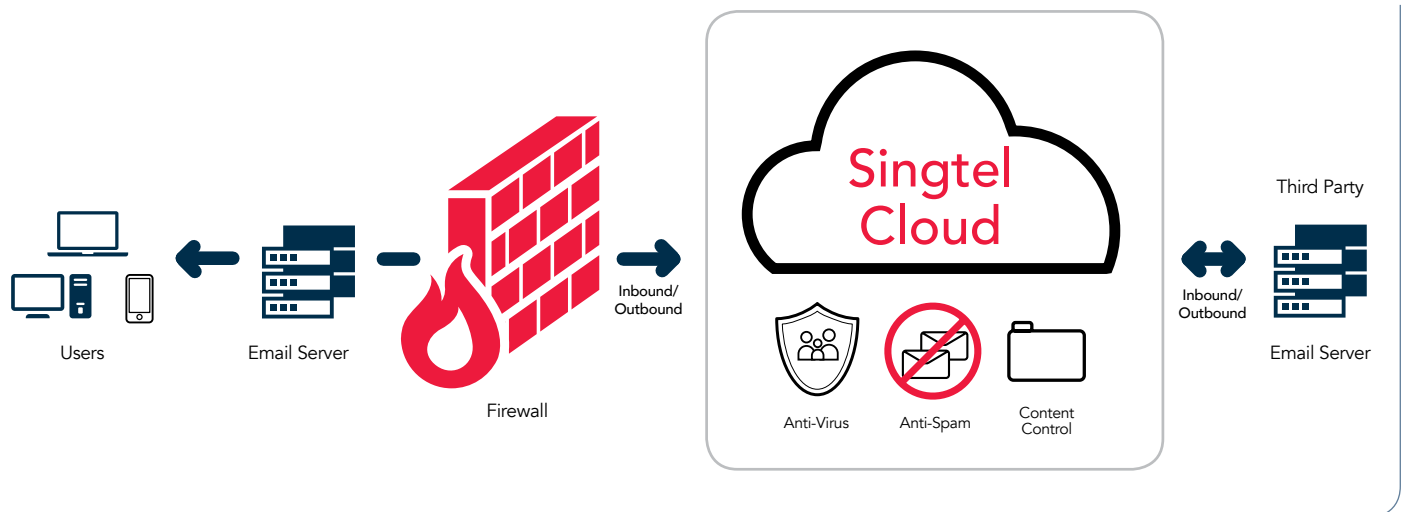

Threats are changing: Email threats are no longer limited to spam and malicious attachments. They now prey on your trust and have become more targeted. Unlike previous threats that were designed to cause disruption, today's attacks stay hidden while they steal confidential data for monetary gain or other malicious intent.

You can't control how your users choose to access their email: A distributed workforce means that email filtering is no longer built into the client device (e.g. Junk Mail folders in Outlook). With mobile devices and tablets being used to access email, it becomes much easier for email threats to slip through the gaps.

Email security is taking more and more time and resources: creating blacklists, updating spam filters, or relying on your own judgement to spot threats; all these methods are ineffective and time consuming for administrators and users. Aside from the negative effect on productivity, mailbox limits are reached sooner because of email spam, costing your business additional storage.

Focus On Your Business, Not Your Email Security

Singtel Email Security-as-a-Service provides the necessary protection to stop email threats from entering your network. By leveraging best-of-breed technologies from leading security vendors, businesses enjoy real-time protection at reduced costs and complexity – while retaining control over email infrastructure at the same time.

Real-time Cloud Protection for Your Business

Email Security-as-a-Service takes the security hassle out of your business premises and moves it to an advanced cloud solution. Leverage the power of a centralised security intelligence network, and save your business the inconvenience of managing hardware or software on-site.

Sophisticated outbound control

protect against sensitive data leaking through outbound email correspondences with sophisticated content analysis techniques. Detect confidential or inappropriate text-based email content effectively with a comprehensive policy-based approach, and let your administrators custom-build highly flexible, intuitive rule-building processes.

Proven inbound protection

advanced perimeter defences incorporate preventive and reactive security measures for comprehensive inbound email security protection. Real-time, multi-layered email threat assessment identifies suspicious email senders, managing both known and emerging email spam techniques away from your network. Our solution offers 'zero-hour' anti-virus protection,

applying outbreak filters on suspicious emails before traditional virus signatures are available. Email Security-as-a-Service saves your business time and resources spent dealing with unwanted email, and protects corporate bandwidth for web, VoIP and other critical systems.

Comprehensive support portal

this solution includes a comprehensive support portal that supplies consolidated and robust reports to customers needing quick access to unique security interests. Reports range from geographically diverse deployments to fully integrated security reports, and portal administrators access a single interface for comprehensive configuration of anti-spam, anti-virus, content filtering, encryption and data protection features.

Features

Features	Description
Anti-virus and anti-spam protection for emails	Blocks viruses and spam before they reach your network. Save on time and resources otherwise wasted dealing with unwanted email, and protect corporate bandwidth.
Email content and file attachment analysis	Enables good corporate governance by filtering inappropriate or confidential information in text-based content and file attachments.
Data protection and compliance management	Secures confidential data and ensures compliance via email encryption and customisable content filtering.
Flexible and simple quarantine management	Administrators and/or end users manage quarantined emails and approved and blocked sender lists.

Benefits

Cost effectiveness

Reduce business costs and complexity. With no on-site equipment to install or maintain, experience savings in bandwidth and storage. Administrative overhead are eased, with no unexpected expenditures.

Administrative control

Retain control with 24x7 access and flexible customisation of policies, configuration settings, quarantine management and reporting.

Assured protection

Enjoy increased protection with industry-leading Service Level Agreements and the power of Singtel Email Security-as-a-Service.

On-demand flexibility

Experience the flexibility of on-demand security as part of Singtel's Security-as-a-Service Suite.

About Singtel

Singtel is Asia's leading communications group providing a portfolio of services including voice and data solutions over fixed, wireless and Internet platforms as well as infocomm technology and pay TV. The Group has presence in Asia, Australia and Africa with over 500 million mobile customers in 25 countries, including Bangladesh, India, Indonesia, the Philippines and Thailand. It also has a vast network of offices throughout Asia Pacific, Europe and the United States.
